(54) IMAGE COMPOSITION METHOD AND INFORMATION PROCESSOR

(57)Abstract:

PROBLEM TO BE SOLVED: To provide an image composition method capable of compositing an image of a decentralized processing type in which a portable communication terminal with small process capability can also be participated; and an information processor therefore.

SOLUTION: In a second terminal connected to one or a plurality of first terminals so as to mutually communicate with each other, a composite image obtained by compositing a second image obtained at its own terminal with an object image extracted from among a first image transmitted from the first image is generated, and this composite image is transmitted to the first terminal to display, thereby decreasing a process load of the first terminal. Thus, an image composition of a decentralized processing type is carried out between a portable communication terminal with small processing capability and the second terminal.
